

EDUCATION

Parul University	Vadodara, Gujarat
B.Tech (Computer Science and Engineering) CGPA - 8.50	November 2022 – April 2026
Green Valley High School	Vadodara, Gujarat
12 th (Senior Secondary School) 87%	June 2020 – June 2022
Tree House High School	Vadodara, Gujarat
10 th (Senior Secondary School) 92.33%	April 2011 – June 2020

SKILLS AND INTERESTS

- Programming languages:** Python, Java, SQL, JavaScript (Basic)
- AI & Machine Learning:** Generative AI (LLMs, RAG Pipelines, Agentic AI), Deep Learning, Machine Learning (Development, Training, Fine-tuning, Model Evaluation), Natural Language Processing (NLP), Predictive Analytics, Computer Vision
- Frameworks & Libraries:** LangChain, LangGraph, CrewAI, Hugging Face Transformers, PyTorch, TensorFlow/Keras, spaCy, Scikit-learn, Pandas, NumPy
- Data & Mathematics:** Feature Engineering, ETL Pipelines, Data Preprocessing, Applied Mathematics (Linear Algebra, Probability, Statistics, Optimization), Data Visualization
- Tools & Platforms:** Docker, Kubernetes (K8s), PostgreSQL, Vector DBs (FAISS), MLflow, Dagster, Git/GitHub, Postman, VS Code
- Model Deployment & Quality Control:** Production Deployment & Integration, Model Evaluation & Rigorous Testing, Flask, FastAPI, Streamlit, System Design, DSA

PROJECTS

- Face Mask – AI-Based Attendance System | Python, OpenCV, FaceNet, Streamlit**
- Engineered a real-time biometric attendance system achieving >99% accuracy by leveraging FaceNet embeddings and OpenCV for facial recognition.
 - Optimized system latency by implementing embedding caching, significantly reducing startup time and ensuring seamless live video processing.
 - Deployed a secure, interactive Streamlit dashboard for faculty to view live attendance logs and manage records.
- VoyageAI – Smart Travel Assistant | LangChain, OpenAI GPT, FAISS, Google Maps API**
- Developed a RAG-based (Retrieval-Augmented Generation) travel planner using LangChain and OpenAI GPT to generate hyper-personalized itineraries.
 - Integrated FAISS vector database to enable semantic search capabilities, providing context-aware trip recommendations based on user queries.
 - Visualized real-time geospatial data by integrating the Google Maps API into a custom Streamlit interface for optimized route planning.
- MedAssist XR – Healthcare Companion | Agentic AI, FastAPI, Groq LLM**
- Architected an Agentic AI healthcare assistant capable of symptom analysis and automated lab report interpretation using the Groq LLM for low-latency inference.
 - Built a high-performance backend using FastAPI to handle concurrent user requests and chat-based guidance
 - Integrated external location APIs (Geoapify, Foursquare) to fetch and recommend nearby medical facilities based on real-time user location.

TRAINING AND INTERNSHIPS

- Data Science Intern | Celebal Technologies (Remote)** May 2025 – July 2025
- Executed end-to-end data analysis workflows using Python and SQL, transforming raw datasets into actionable insights through rigorous data cleaning and preprocessing.
 - Collaborated on real-world machine learning projects to solve business problems, enhancing model performance via statistical analysis and feature engineering.

CERTIFICATES

- Career Essentials in Generative AI: Microsoft December 2025
- Introduction to Generative AI: Google Cloud December 2025
- Data Analytics with Microsoft Fabric: Microsoft December 2024
- Introduction to Data Science & Python Essentials: Cisco February 2024
